## Customer specific solutions

Here at Willpower Electrical Ltd we offer custom solutions for any kind of application.

This custom cubical is just one example of the type of system we can offer, this was designed and built by Willpower Electrical Ltd after a in depth consultation with our client. The system is used to control the speed of two motors that are used in the production of sausages.

The system has two Inverters built into the unit and these are controlled by the custom built control panel. The control panel allows the user to turn the whole cubical on/off, they can also have motor A or motor B running together or by there self, Illuminated lights on the front of the cubical clearly show the status of the system and the drives. The main unique feature is that the two motors can be controlled via the control panel using two potentiometers giving the user very accurate speed control. The system was also equipped with an emergency stop in case of any problems when in use.

***We are here to help!***
